

YOUR

VOICE

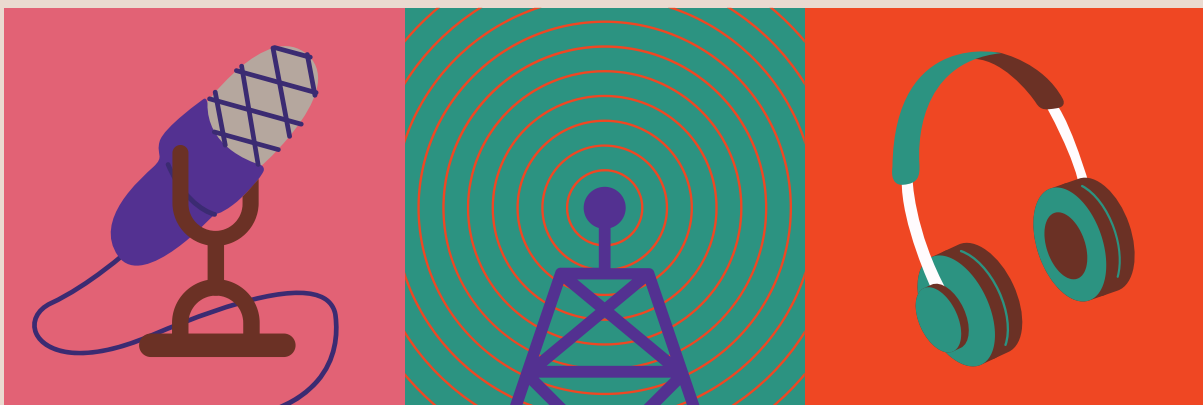

CAN HELP MANY

We are looking for adult English speakers with **atypical speech** (dysarthria, dysphonia, surgery, etc.) to record their voices for a research study.

If you join this study, you will help the development of new techniques to improve speech technologies for people with atypical speech, such as speech assistants, automatic generation of subtitles, etc.

These new technologies can improve the communication of people with atypical speech. You will be compensated with up to \$100 for your collaboration.

JHMI Department of Physical Medicine and Rehabilitation

JHMI Department of Neurology
